14 Causes of Muscle Weakness

It's normal to lose some muscle mass and get weaker with age. Doctors call this sarcopenia. You probably won't notice it much before your 60s or 70s. Sarcopenia also can also come with other health conditions that make you inactive. If your doctor suspects sarcopenia, they may test for it by seeing how fast you can walk.

Living Longer

Science has advanced more in the last 10 years than the previous 500 years.

Dr. Peter Diamandis got his medical degree at Harvard Medical School and studied molecular genetics at MIT. He also won Innovator of The Year and The World Technology Award.

And his groundbreaking new research shows it could be possible to simply stop aging.

He consults with Elon Musk about the future of the world, and especially the future of our health. He believes he can help Musk live a healthy, vibrant life for hundreds of years.

"If you can live another 10 years, there's a very high likelihood you could live another 100 years. That's how fast medical technology is advancing."

Dr. Diamandis believes it will come down to stopping the 'disease of aging'. And to do that we must stop oxidation.

He believes powerful antioxidants can halt the aging process in its tracks, and in some cases reverse it.

See what he believes is the most powerful antioxidant on the planet, and how you can start using it today to radically [change your future right here](#).

PS: Sounds like science fiction right? Well so did organ transplants and DNA sequencing not that long ago. For optimists like Diamandis, the future is NOW. [Click here to learn more](#).

14 Benefits of Walking for Just 15 Minutes

From higher energy and better mood to stress relief, the benefits of walking go beyond weight loss.
